ABOUT ME

Data-driven strategist passionate about transforming data into stories that inspire action. Experienced in building forecasting models, automating workflows, and designing dashboards that translate complex data into clear business impact across finance, marketing, and product analytics teams. Currently pursuing an M.S. in Data Science at Northwestern University, working as a Lead Financial Analyst at Level Blue, and pursuing project opportunities to apply customer analytics to help high-growth technology companies optimize the end-to-end customer journey.

EDUCATION

Northwestern University

Masters (M.S.) Data Science – Artificial Intelligence Specialization (Expected Graduation June 2027)

Relevant Coursework: Applied Statistics, Database Systems, AI and Deep Learning, Practical Machine Learning, Natural Language Processing

University of South Carolina, Darla Moore School of Business

B.S., Business Administration – Marketing & Risk Management, Business Analytics

Honors: Terry and Vera Williams Scholarship, Woodrow Scholar, Capstone Scholar, Marketing Scholar

EXPERIENCE

Level Blue: Cybersecurity & Managed Security Services (PE Owned)

Lead Financial Analyst, Product Management & Development (2024 to present)

- Directed a customer data enrichment program by integrating disparate data systems into a clean, unified data warehouse, strengthening segmentation analytics and improving forecasting accuracy ~20%
- Developed a Python-based ETL (extract transform load) automation to deliver real-time visibility into customer transactions and behavior signals, reducing manual workloads ~1000+ hours and projected savings \$100K in third-party costs annually since implementation
- Built a scenario-based forecasting model to analyze partner and customer cohort retention, churn, revenue growth, and cross-sell performance, projecting \$2.5M annual revenue uplift

AT&T

Lead Financial Analyst (2022 – 2024)

- Analyzed marketing campaign performance and cross-selling trends to identify engagement drivers and product bundle mixes, synthesized learnings into a clear plan to improve churn 5% YoY and increase cross-sell conversion 15% annually
- Played a large role in a large-scale customer analytics modernization effort by automating customer analytics workflows with Python, specifically enhancing segmentation reporting to enable faster marketing performance analysis and decision-making processes
- Partnered with marketing and operations leaders to build a predictive retention dashboard surfacing early churn signals to inform campaign strategies across markets and segments

Financial Analyst (2019 – 2022)

- Designed and scaled a centralized analytics dashboard tracking customer LTV, churn, and ARPU metrics, leveraged by senior marketing leadership teams for quarterly investment decisions
- Collaborated with marketing, operations, and finance teams to translate analytics insights into compelling, leadership-ready documents highlighting product performance trends, buyer behavior insights, and campaign ROI; presented to executives in monthly strategy meetings
- Completed AT&T's Finance Leadership Program, designing dynamic pricing models to evaluate product profitability and value drivers

PROJECT SAMPLES

- Chicago Bulls (Northwestern):** Conducted an end-of-season valuation for the Chicago Bulls, integrating brand asset worth, player statistics, salary data, and sales metrics to forecast trade impacts and team valuation over a 5-year horizon, benchmarked findings across adjacent teams in the NBA
- StatusTix (Northwestern):** Member of an agile team tasked with creating digital sports fan experiences that better unite fans across disparate team and leagues. Specific responsibilities include building a full stack MVP prototype to test desirability of attendance tracking, win/loss record, and multi-user account features using Python, Postgres, Streamlit, and Figma
- Yelp AI Similarity Search Improvements (Northwestern):** Evaluated and compared AI models for Yelp's campaign teams to optimize asset tagging performance, improve classification accuracy, and reduce asset retrieval time; built a semantic search pipeline using Milvus, OpenAI, and GitHub to automate issue tagging and improving retrieval accuracy 35%
- Intelligent Virtual Assistant (Northwestern):** Built an AI-powered virtual assistant using OpenAI's API that converts natural language into SQL database queries and API calls to retrieve and transform real-time data; developed in Python

TECHNICAL SKILLS

- General Workplace:** Full Microsoft Office Suite with high proficiency in Excel modeling
- Programming Languages, Data Visualization, and Databases:** Python, SQL, R, Power BI, Tableau, Streamlit, Seaborn, Excel, PostgreSQL, Snowflake, SQLAlchemy, Milvus, GitHub, Pandas, NumPy, Jupyter
- AI & Other Platforms:** Claude, OpenAI, Gemini, NotebookLM
- Prototyping and Collaboration:** Figma, Miro
